CedarWatt Energy

Independent, vendor-neutral energy advisory for Lebanese homes and small businesses. (Fictional company created for the EECE 503P/798S Agentic Systems assignments.)

1. Mission and Vision

Mission: make reliable, clean electricity affordable by replacing guesswork with transparent, kWh-based engineering. Vision: every household in Lebanon understands exactly what its electricity costs and what each upgrade would save.

2. Services and Pricing (USD)

Service	What you get	Price
Free Energy Check	20-minute call about consumption and goals	Free
Home Energy Audit	Remote bill and appliance review, written savings plan	$150 flat
Rooftop Solar Design Package	Sizing, panel layout, inverter and battery recommendation, bill of materials; report within 5 business days	$600 flat (homes); businesses quoted individually
Inverter and Battery Sizing Review	Independent second opinion on an installer's proposal	$200 flat
WattWatch	Monitoring dashboard and API for production and consumption	$12 per month per site

3. Team

Dr. Rana Haddad - Co-founder and CEO. PhD in power systems; leads energy audits and design reviews. Believes every recommendation must come with its arithmetic.

Karim Saab - Co-founder and CTO. Embedded-systems engineer; leads WattWatch and CedarWatt's sizing tools.

4. Unique Value Proposition

(a) Vendor-neutral: we sell no hardware and install nothing, so advice is never tied to a margin. (b) Every number explained: assumptions are listed in each report. (c) Guaranteed delivery of the design report within 5 business days.

5. How It Works

Step 1: Free Energy Check call. Step 2: you send 3 months of electricity and generator bills. Step 3: we deliver the audit or design report. Step 4: optional referral to certified installers. Step 5: optional WattWatch monitoring after installation.

6. Sizing Assumptions Used in Our Estimates

Unless the customer provides better data, our quick estimates assume 5.5 peak sun hours per day, a system performance ratio of 0.8 (covering inverter, temperature and wiring losses), and 550 W panels of about 2.6 square metres each. These are rough estimates, not quotes; the final design depends on roof orientation, shading and load profile.

7. FAQ

Do you install panels? No. We design and advise; we can refer certified installers but do not guarantee their prices or schedules.

Do you sell hardware? No. We are vendor-neutral.

Which areas do you serve? All Lebanese regions remotely; on-site visits can be arranged in Beirut and Mount Lebanon.

Do you offer financing or help with subsidies? Not at present.

What are your support hours? Monday to Friday, 9:00 to 17:00 Beirut time.

How do I start? Leave your name and email and we will schedule the free Energy Check, or write to hello@cedarwatt.example.
